

Feece Oil Co.

Fluid Analysis Program

Feece Oil Co. provides for purchase a fluid testing program for its clients. We have partnered with Polaris Labs in Indianapolis IN. There are 3 types of test kits that can be purchased from our web site:

1. Basic: \$15.00 per kit / \$150.00 per box of 10
Any lubricant can be tested with this kit. This kit tests the fluid submitted for 33 different properties. Which are 10 different Wear Metals, 3 Contaminant Metals, 6 Multi-Source Metals, 5 Additive Metals, Fuel Dilution, Soot, Water, Viscosity, Acid, Base#, Oxidation & Nitration.
2. Advanced: \$27.00 per kit / \$270.00 per box of 10 kits
This kit tests for all the above PLUS Particulate Count. It provides a numeric count of how many pieces of microscopic dirt is in the oil. This kit is mainly used for expensive hydraulic systems like but not limited to a Poly Extrusion Machine.
3. Coolant: \$20.00 per kit / \$200.00 per box of 10 kits.
Only Coolant or Antifreeze can be tested. This kit tests for 31 different properties. Which are 8 Corrosion Metals, 2 Contaminants, 4 Corrosion Inhibitors, 2 Carrier Salts, Foam, Color, Oil, Fuel, Magnetic Precipitate, Non- Magnetic Precipitate, Odor, Freeze Point, Boiling Point, Antifreeze %, PH, Hardness, Nitrate, Conductance, SCA# & Carboxylic Acid.

The Order Form for these test kits is on the Feece Oil website: [Feece Oil Fluid Test Kit Order Form](#). This is an interactive form for the client to fill out. They need to fill out all open boxes. If the client has a POLARIS Test Kit Account Number, they need to provide it on the form. This is different than their Feece Oil Account Number. If they do not have a Polaris Test Kit account number & are new to this, they are to leave this box blank, & type in the NOTES section: **“New Account, Please Provide New Number.”**

These kits come only in boxes of 10. They MUST order in quantity of boxes of 10 that they want. For example, if they want 30 kits, they must put 3 in the box of How Many Kits Do You Want. If they only want 2 individual test kits, they must order 1 box of 10 kits.

Polaris Labs will direct ship to the client their test kit boxes. Once the fluid has been collected, they need to fill out the paperwork or access their account online & submit the info. [Test Kit Instructions - PDF](#) or [Test Kit Instruction - Video](#). They must also pay for postage to ship to Polaris Labs. It is **highly** suggested that they ship them in a box & not just in the shipping bag provided. Many samples have been damaged & lost during shipping when using just the bag. The results will be emailed to the client within 2-3 days of the lab receiving them.

If you or the client has any questions, you may reach out to me directly – Thank You.
